Enlitho is a nanofabrication foundry in Singapore that provides a one-stop-shop solution ranging from Design-For-Manufacturing, Simulation, Mold Fabrication, Low Volume Production and Scale Up Services for High Volume Production.

Using proprietary technology and processes, we enable you to THINK BIG using our proprietary technology and processes that allows micro/nano-structured channels for microfluidic devices that are designed to perform multi-step functions in a single chip, such as cell sorting, trapping, isolation, docking, lysis etc. We can produce high-resolution and cost-effective microfluidic devices from day one, ensuring scalability of your inventions.
